Subject: Wilcox Refinery Site and submission of National Response Center Report

All,

Last week Kevin and I met the ODEQ at the Wilcox site that is proposed for listing on the NPL. I have attached a map and three pictures that I think represent what we saw. The first picture is near the center of the site and with lead levels so high that nothing will grow and there is a chemical smell where this picture was taken. The second picture is on of crude product literally bubbling out of the field on the east side of the site. The third picture is of the sheen on Sand Creek. The entire site drains to Sand Creek (seen in the background of picture 2).

Needless to say, the FWS will want to be involved in the remediation decisions at this site. Due to the release to water from the site I reported it to the NRC. Since this site is already being investigated I don't know if EPA will/can do anything from an emergency response stand point. But I felt that I needed to report what I saw.
